SUMMARY

Informatics Engineering student at Gunadarma University focused on Data Science, Machine Learning, and AI. Experienced building end-to-end ML pipelines and full-stack applications, from data preprocessing and model development to deployment, spanning health-risk prediction, workforce competency analytics, banking lead scoring, e-commerce and retail analytics, and NLP-based sentiment analysis.

SKILLS

Languages: Python, SQL

Machine Learning & Deep Learning: Scikit-learn, TensorFlow/Keras, XGBoost, NLP (IndoBERT, Sastrawi), RandomizedSearchCV, StratifiedKFold

Data Analysis & Visualization: Pandas, NumPy, EDA, Data Wrangling, Statistical Analysis (hypothesis testing, chi-square), RFM segmentation, K-Means clustering, CLV analysis, PowerBI

Web Development: FastAPI, React, Vite, Tailwind CSS

Tools: Git, SQLite, PostgreSQL

PROJECTS

VitaCheck - Health Risk Prediction System (Undergraduate Thesis)
github.com/DaffaAlfiannoor/VitaCheck

- Built a full-stack ML system (CRISP-DM) classifying users into Low/Medium/High health risk on a 15,000-row lifestyle dataset; compared Logistic Regression, Random Forest, XGBoost, and SVM.
- Selected SVM as the final model, prioritizing recall on the High Risk class (0.9313) over raw accuracy; overall accuracy 0.9180, F1 0.9178, weighted AUC-ROC 0.9892.
- Used permutation importance to identify sleep duration, physical activity, and pre-sleep phone usage as the top predictors.
- Backend: FastAPI, JWT authentication, SQLite. Frontend: React, Vite, Tailwind CSS, Recharts, including a prediction-history dashboard.

RumahKarir - IT Skill Gap Detection System
github.com/DaffaAlfiannoor/RumahKarir

- AI-based system identifying employee competency gaps from performance, skills, experience, and career interest data, against SKKNI/SFIA standards, using NLP (IndoBERT, Sastrawi).
- Analyzed 123,849 job postings across 24,473 companies and 35 skill categories; redesigned the Gap Score methodology using IQR-based thresholding to address class imbalance.
- Found remote postings pay a median of US$113,488 vs US$78,000 for non-remote ($p < 0.0001$), and high-skill postings earn a US$6,754 premium over low-skill postings ($p < 0.0001$).

Predictive Lead Scoring Portal for Banking Sales

- Built a predictive system that analyzes prospective customer data to generate a lead score indicating likelihood of conversion, supporting bank sales prioritization.

E-Commerce Data Analysis
github.com/DaffaAlfiannoor/E-Commerce-Data-Analysis

- Analyzed 99,441 orders and 112,650 order items to identify sales trends and customer behavior patterns; 97.0% of orders were delivered successfully.

- Identified health_beauty as the top-revenue category (R$1,233,132) and segmented customers via RFM, finding the "Cant Lose Them" segment drove 22.8% of total revenue (R$3,512,699.19).

Sentiment Analysis on the Shopee App

github.com/DaffaAlfiannoor/Sentiment-Analysis-on-the-Shopee-App

- Built a positive/negative sentiment classifier on 56,614 cleaned Shopee app reviews scraped from the Google Play Store.
- Achieved 85.18% accuracy with Logistic Regression + TF-IDF, outperforming Naive Bayes (75.31%), Random Forest + Word2Vec (76.05%), and Decision Tree (73.71% test accuracy, indicating overfitting).

Online Retail Analysis - RFM Segmentation & Customer Lifetime Value

github.com/DaffaAlfiannoor/sales_customer_analysis

- Cleaned a 541,909-row UK online retail transaction dataset down to 392,692 rows and performed RFM segmentation, K-Means clustering, and CLV analysis across 4,338 unique customers (total revenue GBP 8,911,407.90).
- Identified a 311-customer "Champions" cluster (silhouette score 0.66) with average monetary value of GBP 15,620.40, against an overall average CLV of GBP 2,048.69 and 79.4% monthly churn.

Customer Churn Analysis & Prediction

github.com/DaffaAlfiannoor/Customer-Churn-Analysis-and-Prediction

- Built an end-to-end churn prediction pipeline on the Telco Customer Churn dataset (7,043 customers, 19 features), covering data quality audit, EDA, statistical testing (chi-square, Cramér's V), and a leakage-free scikit-learn preprocessing pipeline.
- Compared five classifiers with 5-fold stratified cross-validation and RandomizedSearchCV; tuned Gradient Boosting reached a test ROC-AUC of about 0.843, with an F1-optimal decision threshold of 0.35 to handle the 26.5% churn imbalance.
- Found month-to-month contracts churn at 42.7% versus 2.8% for two-year contracts; used permutation importance and Low/Medium/High risk segmentation to help prioritize retention efforts.
- Delivered an interactive 7-tab Streamlit dashboard with KPIs, model performance, interpretability, and a real-time churn prediction form.

EXPERIENCE

Machine Learning Cohort

ASAH led by Dicoding 2025 - 2026

- Built and deployed ML models for real-world use cases using Python and TensorFlow/Keras, covering the full lifecycle from data preparation to deployment.

Data Scientist Cohort

Coding Camp powered by DBS Foundation 2026

- Practiced end-to-end data science workflows: preprocessing, EDA, feature engineering, model building and evaluation, and visualization through real-world case studies.

EDUCATION

Bachelor's Degree, Informatics Engineering

Gunadarma University, Depok, Jawa Barat 2023 - Present
